

TECHNOLOGY & COSTS**Biorenewable Insights****Power to Liquids: E-Chemicals**

Table of Contents

A Report by **NexantECA, the Energy and Chemical Advisory company**

Published Date: December 2023

www.nexanteca.com/subscriptions-and-reports**Contents**

1	Executive Summary	1
1.1	Key Conclusions.....	1
1.2	Introduction and Scope	4
1.3	Manufacturing Technology.....	5
1.3.1	Electrolysis Intermediates to Products.....	5
1.3.2	Microbial Processing to Products.....	6
1.4	Economics	6
1.4.1	Electrolysis-Based Manufacturing.....	6
1.4.2	Microbial Processing Manufacturing	9
1.5	Carbon Intensity Impact	11
2	Introduction.....	12
2.1	Overview of Power to X.....	12
2.2	Scope of the Report	12
2.2.1	Electrolytic Intermediates to Products.....	12
2.2.2	Microbial Processing to Products.....	13
2.3	Drivers for Power to X Chemicals	13
2.3.1	Sustainability	13
2.3.2	Regulatory and Policy Drivers.....	16
2.3.3	Geopolitical Drivers	18
3	Electrolysis Intermediates to Chemicals	20
3.1	Electrolysis	20
3.1.1	Overview	20
3.1.2	Electrolyzers.....	21
3.1.3	Efficiency and Power Consumption	22
3.2	Hydrogen via Electrolysis of Water	23
3.2.1	Overview	23
3.2.2	Alkaline Electrolysis.....	24
3.2.3	Proton Exchange Membrane (PEM) Electrolysis	28
3.2.4	Solid Oxide Electrolysis.....	33

3.3	Carbon Monoxide via Electrolysis of Carbon Dioxide	37
3.3.1	Overview	37
3.3.2	Electrolysis at Ambient Conditions	38
3.3.3	High Temperature Electrolysis	41
3.4	Carbon Monoxide From Carbon Dioxide.....	44
3.4.1	Overview	44
3.4.2	Water-Gas Shift.....	44
3.4.3	Direct Hydrogenation to Carbon Monoxide	45
3.5	Methanol.....	46
3.5.1	Overview	46
3.5.2	Methanol Production Technology.....	46
3.5.3	Direct Carbon Dioxide Use in Synthesis	49
3.6	Methanol Derivatives.....	50
3.7	Ammonia	51
3.7.1	Overview	51
3.7.2	Ammonia Derivatives	57
4	Microbial Electrosynthesis	58
4.1	Overview.....	58
4.2	Chemistry	59
4.2.1	Electrometabolism.....	59
4.2.2	Synthesis	60
4.2.3	Energy Consumption.....	62
4.3	Microorganisms	64
4.4	Reactors and Reaction Conditions.....	65
4.5	Product Recovery	67
5	Project and Implementation Considerations	68
5.1	Oxygen Disposition	68
5.1.1	Addressable Markets.....	68
5.1.2	Competition with Incumbent Producers	69
5.1.3	Scale of Supply	69
5.1.4	Decarbonization Mission Alignment.....	70
5.2	Sourcing Carbon Dioxide	70
5.2.1	Cost of Carbon Dioxide	71
5.2.2	Effect on Emissions Accounting of Chemicals	72
5.3	Sourcing Renewable Power.....	73
5.3.1	Electrical Power Pricing.....	74
5.3.2	Electrical Power Availability	76
5.3.3	Power-to-X Behind the Meter	77
6	Economics of e-Chemicals.....	79
6.1	Electrolysis E-Chemicals Economics	79
6.1.1	Introduction and Methodology	79
6.1.2	Technology and Scenario Coverage	82

6.1.3	Methanol.....	83
6.1.4	Ammonia	91
6.2	Speculative Microbial Electrosynthesis Economics	98
6.2.1	Introduction and Methodology	98
6.2.2	Technology and Scenario Coverage.....	101
6.2.3	Variable Cost Model.....	102
7	Carbon Intensity	105
7.1	Methodology	105
7.1.1	Generic Nature of This Analysis.....	105
7.1.2	Manufacturing Carbon Intensity Methodology	105
7.1.3	Scope 3 Emissions.....	109
7.2	Carbon Intensity of Manufacturing	110
7.2.1	Overview	110
7.2.2	Renewable Electricity Basis	110
7.2.3	Grid Electricity Basis	112
8	Implications for Conventional Industry	115
8.1	Regulatory Outlook for Power-to-X	115
8.1.1	General Regulatory Trends.....	115
8.1.2	Geopolitical Drivers	116
8.1.3	Compliance Effects on Power-to-X	116
8.2	Conventional Chemical Industry Outlook for Power-to-X.....	117
8.3	Commercial Outlook for Power-to-X	117
8.3.1	Carbon Dioxide Feedstock Acquisition	117
8.3.2	Commercial Offtake.....	118
8.3.3	Power Procurement.....	118
8.4	Technical Outlook.....	119
8.4.1	Deployment of Available Technology.....	119
8.4.2	Medium-Term Technical Improvements.....	119

Appendices

A	NexantECA Intermittent Simulation Models	122
A.1	Electricity Pricing Basis	122
A.2	Production Logic.....	124
A.3	Monte Carlo Simulation	125
A.4	Model Behavior	127
A.5	Limitations of the Model	129
B	References	132

Figures

Figure 1	Potential Power-to-X Chemical Derivatives of Methanol.....	5
Figure 2	Summary of Electrolysis-Based Manufacturing Economics Results	8
Figure 3	Summary of Microbial Electrosynthesis Variable Cost Estimates by Product.....	10
Figure 4	Graphical Comparison of Power-to-X Fuels Manufacturing Carbon Intensity, Renewable Electricity and Fossil Carbon Input Basis	11
Figure 5	Diagram of Electrolyzer Producing Hydrogen	21
Figure 6	Sample Performance Curve of Electrochemical Process.....	23
Figure 7	Schematic of Unipolar (a) and Bipolar (b) Alkaline Electrolysis Modules.....	26
Figure 8	Basic Flow Diagram of Alkaline Electrolysis System for Hydrogen Production	27
Figure 9	Schematic View of a PEM Electrolysis Cell.....	30
Figure 10	Diagram of a PEM Electrolyzer Module	30
Figure 11	Basic Flow Diagram of PEM Electrolysis System for Hydrogen Production	32
Figure 12	Example of a Solid Oxide Electrolytic Cell (SOEC) Module	34
Figure 13	Typical Two-Column Distillation Simplified Process Flow Diagram	48
Figure 14	Selected Methanol Derivatives from Commercial Processes	51
Figure 15	Basic Ammonia Converter Design.....	55
Figure 16	Various Ammonia Converter Designs	56
Figure 17	Capture of Electrical Potential by Biochemical Systems	58
Figure 18	Speculative Model of Key Metabolic Activities in Mixed Culture Microbial Electrosynthesis	59
Figure 19	Metabolic Pathways for Electrofuels and Electrochemicals	61
Figure 20	Schematic Diagram of Divided Microbial Electrosynthesis Reactor.....	66
Figure 21	Summary of Microbial Electrosynthesis Variable Cost Estimates by Product.....	103
Figure 22	Definitions of Scope Emissions	106
Figure 23	Process Carbon Balance	106
Figure 24	Utility Emissions Equation	108
Figure 25	Graphical Comparison of Power-to-X Fuels Manufacturing Carbon Intensity, Renewable Electricity and Fossil Carbon Input Basis	111
Figure 26	Graphical Comparison of Power-to-X Fuels Manufacturing Carbon Intensity, Renewable Electricity and Neutral Carbon Input Basis.....	111
Figure 27	Graphical Comparison of Power-to-X Fuels Manufacturing Carbon Intensity, Grid Electricity, and Fossil Carbon Input Basis	113
Figure 28	Graphical Comparison of Power-to-X Fuels Manufacturing Carbon Intensity, Grid Electricity and Neutral Carbon Input Basis	113
Figure 29	Adjusted Pareto Curve of Electricity Pricing	123
Figure 30	Monte Carlo Simulation Price Distribution by Number of Model Runs	126
Figure 31	Operational Case Density of Simulated Power-to-X Ammonia Plant, Electricity Price versus Plant-Gate Price	127
Figure 32	Log-Linear Plot of Unit Production Costs versus Plant-Gate Product Price, with Operating Rate and Accessed Power Price	128
Figure 33	Histogram of EU Day-Ahead Pricing and U.S. Midwest NAPL	129

Tables

Table 1	Summary of NexantECA Strategic Discussion	3
Table 2	Power-to-X Manufacturing Cost of Production Scenarios.....	6
Table 3	Summary of Electrolysis-Based Manufacturing Economics Results	7
Table 4	Summary of Intermittent Manufacturing Optimization Results for e-Methanol and e-Ammonia.....	8
Table 5	Summary of Microbial Electrosynthesis Variable Cost Estimates by Product.....	9
Table 6	Power-to-X Fuels Manufacturing Carbon Intensity Summary, Renewable Electricity Basis.....	11
Table 7	Half-Reactions for Carbon Dioxide Reduction	39
Table 8	Carbon and Reducing Equivalent Inputs to Products for Microbial Electrosynthesis	61
Table 9	Standard Potentials for the Reduction of Carbon Dioxide to Products	62
Table 10	Ideal Minimum Energy Consumption of Microbial Biosynthesis Reactions.....	64
Table 11	Summary of Separation Methods for Products from Aqueous Fermentation Broth.....	67
Table 12	Sample Large-Scale Oxygen Using Chemical Processes	68
Table 13	Key Considerations in Carbon Dioxide Supply for Power-to-X Manufacturing	71
Table 14	Summary of Power Sourcing Issues in Power-to-X Manufacturing	74
Table 15	Prices of Raw Materials, Utilities, and Labor	81
Table 16	Power-to-X Manufacturing Cost of Production Scenarios.....	83
Table 17	Key Technoeconomic Assumptions in e-Methanol Models	83
Table 18	Summary of Cost of Production for e-Methanol	84
Table 19	Summary of Intermittent Manufacturing Optimization Results for e-Methanol.....	84
Table 20	Cost of Production Estimate for e-Methanol, PEM Electrolysis Hydrogen with Water-Gas Shift of Stack Carbon Dioxide and Methanol Synthesis, U.S. Midwest, Maximal Operating Rate.....	86
Table 21	Cost of Production Estimate for e-Methanol, PEM Electrolysis Hydrogen with Water-Gas Shift of DAC Carbon Dioxide and Methanol Synthesis, U.S. Midwest, Maximal Operating Rate.....	87
Table 22	Cost of Production Estimate for e-Methanol, PEM Electrolysis Hydrogen with Water-Gas Shift of Stack Carbon Dioxide and Methanol Synthesis, Western Europe, Maximal Operating Rate	88
Table 23	Cost of Production Estimate for e-Methanol, PEM Electrolysis Hydrogen with Water-Gas Shift of DAC Carbon Dioxide and Methanol Synthesis, Western Europe, Maximal Operating Rate	89
Table 24	Sensitivity of Intermittent e-Methanol Production (PEM/WGS/Synthesis) by Electricity and Methanol Price, U.S. Midwest	90
Table 25	Sensitivity of Intermittent e-Methanol Production (PEM/WGS/Synthesis) by Electricity and Methanol Price, Western Europe	91
Table 26	Key Technoeconomic Assumptions in e-Ammonia Model.....	92
Table 27	Summary of Cost of Production for e-Ammonia from PEM/PSA/Haber Process	93
Table 28	Summary of Intermittent Manufacturing Optimization Results for e-Ammonia from PEM/PSA/Haber Process.....	93
Table 29	Cost of Production Estimate for e-Ammonia, PEM Electrolysis Hydrogen with PSA Nitrogen and Haber Process, U.S. Midwest, Maximal Operating Rate	95

Table 30	Cost of Production Estimate for e-Ammonia, PEM Electrolysis Hydrogen with PSA Nitrogen and Haber Process, Western Europe, Maximal Operating Rate	96
Table 31	Sensitivity of Intermittent e-Ammonia Production (PEM/PSA/Haber) by Electricity and Ammonia Price, U.S. Midwest.....	97
Table 32	Sensitivity of Intermittent e-Ammonia Production (PEM/PSA/Haber) by Electricity and Ammonia Price, Western Europe.....	98
Table 33	Key Mass Balance Assumptions for Microbial Electrosynthesis.....	99
Table 34	Ideal Mass and Energy Input Values for Microbial Electrosynthesis Modeling	100
Table 35	Microbial Electrosynthesis Model Material Inputs and Outputs by Product.....	101
Table 36	Summary of Microbial Electrosynthesis Variable Cost Estimates by Product.....	102
Table 37	Microbial Electrosynthesis Itemized Variable Cost Model Results, USGC, Stack Carbon Dioxide	103
Table 38	Microbial Electrosynthesis Itemized Variable Cost Model Results, USGC, DAC Carbon Dioxide	104
Table 39	Microbial Electrosynthesis Itemized Variable Cost Model Results, WE, Stack Carbon Dioxide	104
Table 40	Microbial Electrosynthesis Itemized Variable Cost Model Results, WE, DAC Carbon Dioxide	104
Table 41	Utility Emissions Factors	108
Table 42	Power-to-X Fuels Manufacturing Carbon Intensity Summary, Renewable Electricity Basis.....	110
Table 43	Power-to-X Fuels Manufacturing Carbon Intensity Summary, Grid Electricity Basis.....	112

TECHNOLOGY & COSTS

Biorenewable Insights

The NexantECA Subscriptions' Biorenewable Insights program is recognized globally as the industry standard source for information relevant to the chemical process and refining industries. Biorenewable Insights reports are available as a subscription program or on a single report basis.

Contact Details:

Americas:

Steven Slome, Principal, Biorenewable Insights
Phone: +1-914-609-0379, e-mail: sslome@NexantECA.com

Erica Hill, Client Services Coordinator, Subscriptions and Reports
Phone: +1-914-609-0386, e-mail: ehill@NexantECA.com

EMEA:

Anna Ibbotson, Vice President, Sales and Marketing
Phone: +44-207-950-1528, aibbotson@NexantECA.com

Asia:

Chommanad Thammanayakatip, Managing Consultant
Phone: +66-2793-4606, email: chommanadt@NexantECA.com

NexantECA Subscriptions and Reports provide clients with comprehensive analytics, forecasts and insights for the chemicals, polymers, energy and cleantech industries. Using a combination of business and technical expertise, with deep and broad understanding of markets, technologies and economics, NexantECA provides solutions that our clients have relied upon for over 50 years.
