

TECHNOLOGY & COSTS**Technoeconomics - Energy & Chemicals (TECH)****TECH 2023S12 Sustainable Materials for
Chemical Construction****Table of Contents**A Report by **NexantECA**, the Energy and Chemical Advisory company

Published Date: December 2023

www.nexanteca.com/subscriptions-and-reports**Contents**

1	Executive Summary	1
1.1	Overview.....	1
1.2	Low-Emissions Materials Technology	1
1.2.1	Concrete	1
1.2.2	Steel	2
1.2.3	Aluminum	3
1.3	Expected Materials Cost Increases.....	3
1.4	Case Study: Inflation of Capital Costs for a Carbon Capture Project	5
2	Introduction.....	6
2.1	Overview.....	6
2.2	Scope of this Report.....	6
2.3	Drivers for Green Construction Materials.....	7
2.3.1	Sustainability	7
2.3.2	Regulatory and Policy Drivers.....	8
2.4	Current Sustainable Construction Materials Business Activity	10
2.4.1	Cement and Concrete	10
2.4.2	Aluminum	11
2.4.3	Steel	12
3	Sustainable Manufacturing of Concrete	15
3.1	Introduction.....	15
3.2	Process Technology.....	16
3.2.1	Conventional Cement Production	16
3.2.2	Cement Production with Carbon Capture and Sequestration	18
3.2.3	Cement Production with Chemical Looping	26
3.3	Sustainable Manufacturing Scenarios.....	31
3.3.1	Emissions Reduction from Incremental Technology Change	31
3.3.2	Emissions Reduction from Fuel Substitution	32

3.3.3	Emissions Reduction from Cement Composition Changes	32
3.3.4	Emissions Reduction from Carbon Capture	32
4	Sustainable Manufacturing of Steel	34
4.1	Introduction.....	34
4.2	Process Technology.....	35
4.2.1	Blast Furnace-Basic Oxygen Furnace	35
4.2.2	Electric Arc Furnace	46
4.2.3	Direct Reduced Iron-Electric Arc Furnace.....	51
4.3	Sustainable Manufacturing Scenarios.....	58
5	Sustainable Manufacturing of Aluminum.....	61
5.1	Introduction.....	61
5.2	Process Technology.....	62
5.2.1	Hall-Héroult Process	62
5.2.2	Carbon-Free Aluminum Smelting	69
5.3	Sustainable Manufacturing Scenarios.....	73
5.3.1	Emissions Reduction from Electrical Energy Use	73
5.3.2	Emissions Reduction from Carbon Anode Consumption.....	73
6	Effect of Green Construction Materials on Capital Costs.....	75
6.1	Methodology	75
6.1.1	Defining Capital Cost.....	75
6.1.2	Green Construction Material Relative Cost.....	76
6.1.3	Capex Estimation	80
6.2	Modeled Cost Differences	82
6.2.1	Summary	82
6.2.2	Concrete.....	84
6.2.3	Steel	86
6.2.4	Aluminum	89
7	Case Study: Membrane Carbon Dioxide Capture Process.....	91
7.1	Summary	91
7.2	Detailed Calculation	91

Appendices

A	Definitions of Capital Cost Terms Used in Process Economics.....	96
B	Definitions of Operating Cost Terms Used in Process Economics	101
C	TECH Program Title Index (2013-2023)	104
D	References	107

Figures

Figure 1	Summary of Variable Cost of Production Estimates for Portland Clinker	4
Figure 2	Summary of Variable Cost of Production Estimates for Steel and Aluminum	5
Figure 3	Block Flow Diagram of Cement Manufacturing	17
Figure 4	Cross Section of a Rotary Kiln for Clinker Production	17
Figure 5	Major Classes of Chemical Solvents in Carbon Capture	21
Figure 6	Block Flow Diagram of a CCS-Integrated Cement Mill	25
Figure 7	Chemical Looping Process Principle	26
Figure 8	Carbonate Looping Process Schematic	29
Figure 9	Block Flow Diagram of a Chemical Looping-Integrated Cement Mill	31
Figure 10	Ellingham Diagram of Major Redox Reactions in Carbothermic Reduction and Metal-Slag Fining	37
Figure 11	Vertical Shaft Blast Furnace	40
Figure 12	Diagram of Basic Oxygen Furnace	42
Figure 13	Illustration of Basic Oxygen Furnace Charging	43
Figure 14	Schematic Cross Section of AC and DC EAF Designs	47
Figure 15	AC Primary Electric Arc Furnace Lid	48
Figure 16	Hot Ladle EAF	49
Figure 17	Major Operations in EAF Heats	50
Figure 18	Ellingham Diagram of the Iron Oxides with Hydrogen and Carbon Monoxide Reductants	53
Figure 19	Simplified Cross Section of a DRI Shaft Furnace	56
Figure 20	Block Flow Diagram of Low-CI DRI-EAF Steel Process	57
Figure 21	Hall-Héroult Cell with Prebaked Anodes, Cross Section	65
Figure 22	Hall-Héroult Cell with Prebaked Anodes, Plan View	65
Figure 23	Hall-Héroult Cell with Söderberg Anode, Cross Section and Side View	65
Figure 24	Potline Series Configuration in Aluminum Electrowinning Cells	66
Figure 25	Cross-Section of Hall-Héroult Process Pot Showing Continuous Feeding of Prebaked Anodes	67
Figure 26	Schematic of Aluminum Smelter Operations	68
Figure 27	Phase Diagram of Cryolite Molten Salt Compositions	70
Figure 28	Carbon-Free Aluminum Anode Property Optimization	71
Figure 29	Elysis Carbon-Free Molten Salt Electrolysis Pot Designs	72
Figure 30	Summary of Variable Cost of Production Estimates for Portland Clinker	83
Figure 31	Summary of Variable Cost of Production Estimates for Steel and Aluminum	83
Figure 32	Comparison of Variable Costs of Production for Crude Steel with Hydrogen Breakout	88

Tables

Table 1	Key Decarbonization Scenarios for Major Construction Materials	1
Table 2	Summary of Estimated Variable Cost Modeling	4
Table 3	Expected Green to Conventional Cost Ratio Factors from Variable Cost Modeling	5
Table 4	Summary of Cost Inflation from Existing Front-End Engineering and Design Cost Calculations	5
Table 5	Main Gas Absorption Processes for CO ₂ Removal	19
Table 6	Major Summary Reactions in Carbothermic Reduction of Iron Ore	36
Table 7	Major Summary Reactions in Basic Oxygen Furnace	39
Table 8	Sample BOF Converter Operating Data ⁰	46
Table 9	Major Reactions in the Direct Reduction of Iron	53
Table 10	DRI Process Reactor Types	55
Table 11	Green Building Material Technology Scenario Selection	76
Table 12	Price of Raw Materials and Utilities	78
Table 13	Key Assumptions in Green Materials Cost Methodology	79
Table 14	Fabrication Cost Factor Estimates	81
Table 15	Major Equipment Cost Inflation Factors	82
Table 16	Summary of Estimated Variable Cost Modeling	82
Table 17	Expected Green to Conventional Cost Ratio Factors from Variable Cost Modeling	84
Table 18	Variable Cost of Production of Portland Clinker via the Rotary Kiln Process	85
Table 19	Variable Cost of Production of Portland Clinker via the Rotary Kiln Process with Calcium Oxide Looping and Carbon Dioxide Sequestration	85
Table 20	Variable Cost of Production Estimate for Crude Steel via the BF-BOF Process, 25% BF Scrap Charge, 30% BOF Scrap Charge	87
Table 21	Variable Cost of Production Estimate for Crude Steel via DRI-EAF and Ladle Slag Fining, 3:1 Green Hydrogen: NG Basis, 25% EAF Scrap Charge	87
Table 22	Variable Cost Estimate for Aluminum via the Hall-Heroult Process with Prebaked Consumable Carbon Anodes	90
Table 23	Variable Cost Estimate for Aluminum via a Speculative Carbon-Free Anode Pot Electrowinning Process	90
Table 24	Summary of Cost Inflation from Existing Front-End Engineering and Design Cost Calculations	91
Table 25	Aggregated Materials Cost Contributions for MTR Technology Carbon Capture Process - Base Case	92
Table 26	Materials Cost Classification for Major Categories in MTR Capital Cost Estimate	93
Table 27	Aggregated Materials Cost Contributions for MTR Technology Carbon Capture Process - Green Materials	94

TECHNOLOGY & COSTS

Technoeconomics - Energy & Chemicals (TECH)

The NexantECA Subscriptions' Technoeconomics - Energy & Chemicals (TECH) program is recognized globally as the industry standard source for information relevant to the chemical process and refining industries. Technoeconomics - Energy & Chemicals (TECH) reports are available as a subscription program or on a single report basis.

Erica Hill, Client Services Coordinator, Subscriptions and Reports

Phone: + 1-914-609-0386, e-mail: ehill@NexantECA.com

EMEA:

Anna Ibbotson, Vice President, Sales and Marketing

Phone: +44-207-950-1528, aibbotson@NexantECA.com

Asia:

Chommanad Thammanayakatip, Managing Consultant

Phone: +66-2793-4606, email: chommanadt@NexantECA.com

NexantECA Subscriptions and Reports provide clients with comprehensive analytics, forecasts and insights for the chemicals, polymers, energy and cleantech industries. Using a combination of business and technical expertise, with deep and broad understanding of markets, technologies and economics, NexantECA provides solutions that our clients have relied upon for over 50 years.
